EXAMINER

SORRELL, ERON J

ART UNIT	PAPER NUMBER
----------	--------------

2182

DATE MAILED: 06/24/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/750,303

Applicant(s)

MARSHALL ET AL.

Examiner

Eron J Sorrell

Art Unit

2182

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 January 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-62 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-62 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 December 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Specification

1. Please update the specification with serial numbers or patent number of the identified copending patent applications.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1,3,5-7,17,19,23-25,27,32,37,36-38,48,50,54-56, and 58 are rejected under 35 U.S.C. 102(e) as being anticipated by Feldman (U.S. Patent No. 6,654,745).

4. Referring to method claim 1 and system claim 32, Feldman teaches a method for providing integrated resource management comprising the steps of:

Art Unit: 2182

a) identifying a resource for deployment to a network wherein a unique specifier is assigned to the resource (see lines 41-44 of column 3 and lines 43-67 of column 4);

b) storing resource identification information in a centralized repository, wherein resource identification information is associated with the unique specifier (see lines 41-44 of column 3 and lines 43-67 of column 4); and

c) enabling resource retrieval based on the unique specifier (see lines 41-44 of column 3 and lines 43-67 of column 4).

5. Referring to method claim 3 and system claim 34, Feldman teaches the unique specifier comprises one or more of resource identifier, a type identifier, and a version identifier (see lines 42-46 of column 6).

6. Referring to method claims 5-7 and system claims 36-38, Feldman teaches the unique specifier comprises a hierarchical resource name that is allocated to an entity, wherein the hierarchical resource name comprises a domain name, and wherein the domain name is a part of the unique specifier (see line 26 of column 12 to line 21 of column 13; Note Feldman gives an

Art Unit: 2182

example of accessing a webpage using an browser and the webpages identifier (URL). URLs comprise domain names.

7. Referring to method claim 17 and system claim 48, Feldman teaches resource retrieval comprises utilizing a hash map for local software resources (see line 60 of column 5 to line 55 of column 6).

8. Referring to method claim 19 and system claim 50, Feldman teaches the step of enabling resource retrieval further comprises requesting a resource from a resource manager using a further comprises resource specifier (see lines 1-14 of column 7).

9. Referring to method claims 23 and 24 and system claim 54 and 55, Feldman teaches utilizing one or more resource retrieval mechanisms that are configurable to enable one or more resource specific strategies and/or one or more alternative resource strategies (see lines 1 of column 7 to line 9 of column 8).

10. Referring to method claim 25 and system claim 56, Feldman teaches the step of enabling resource retrieval further comprises utilizing one or more resource retrieval mechanisms

Art Unit: 2182

that are transparent to a requesting entity (see lines 54-62 of column 3).

11. Referring to method claim 27 and system claim 58, Feldman discloses the step of enabling further comprises implementing a default access strategy (see lines 1-14 of column 7).

Claim Rejections - 35 USC § 103

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

13. Claims 2, 11-16, 33, and 42-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feldman in view of Kumar et al. (U.S. Patent No. 6,681,242 hereinafter "Kumar").

14. Referring to method claim 2 and system claim 33, Feldman fails to teach the method and system further comprising the step of ensuring dependencies related to the resource are satisfied.

Art Unit: 2182

Kumar teaches, in an analogous system, that it is desirable to ensure dependencies related to the resource are satisfied in order to prevent a deadlock situation (see lines 16-47 of column 1).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the method and system of Feldman with the above teachings of Kumar. One of ordinary skill in the art would have been motivated to make such modification in order to prevent deadlock situations from occurring as suggested by Kumar (see lines 16-47 of column 1).

15. Referring to method claims 11-14 and system claim 42-45, Kumar teaches the step comprising ensuring dependencies are satisfied further comprises the step of utilizing a deployment tool (see lines 20-26 of column 2), wherein the deployment tool deploys the resource to the network and deploys information related to one or more of the resource's relationships, definition and identity to a resource manager or a repository accessible to the resource manager (see lines 10-18 of column 5), wherein the information related to the resource's relationships comprises dependency information wherein dependency information comprises a definition of the nature of a

Art Unit: 2182

dependency and an identifier of a dependent entity (see lines 35-42 of column 2).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system and method of Feldman with the above teachings of Kumar. One of ordinary skill in the art would have been motivated to make such modification in order to determine if any new dependencies will cause a deadlock in the system.

16. Referring to method claims 15 and 16 and system claims 46 and 47, Kumar teaches the resource manager denies deployment of the resource if dependencies are not satisfied and wherein the resource manager provides a warning wherein the warning provides information related to unsatisfied dependencies and proceeds with deployment of the resource if dependencies are not satisfied (see paragraph bridging columns 1 and 2).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system and method of Feldman with the above teachings of Kumar. One of ordinary skill in the art would have been motivated to make such modification in order for a user of the computer system to ascertain which resources have dependencies.

Art Unit: 2182

17. Claims 4 and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feldman in view of Parad (U.S. Patent No. 5,369,570).

18. Referring to method claim 4 and system claim 35, Feldman fails to the unique specifier comprises a resource identifier, a type identifier, and a version identifier.

Parad teaches, in an analogous system, a unique specifier comprises a resource identifier, a type identifier, and a version identifier (see lines 40-47 of column 16).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system and method of Feldman with the above teachings of Parad. One of ordinary skill in the art would have been motivated to make such modification in order to further distinguish resources from one another.

19. Claims 8-10 and 39-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feldman in view of Porter et al. (U.S. Patent No. 6,636,597 hereinafter "Porter").

20. Referring to method claims 8-10 and system claims 39-41, Feldman fails to teach resource management comprises static

Art Unit: 2182

resource management and dynamic resource management, wherein static management comprises resource allocation and deployment and wherein dynamic resource management comprises event state correlation.

Porter teaches, in an analogous system, resource management comprises static resource management and dynamic resource management, wherein static management comprises resource allocation and deployment and wherein dynamic resource management comprises event state correlation (see paragraph bridging columns 4 and 5).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system and method of Feldman with the above teachings of Porter. One of ordinary skill in the art would have been motivated to make such modification in order to allow for flexible routing techniques in communication networks as suggested by Porter (see lines 50-57 of column 2).

21. Claims 18 and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feldman in view of Freeman et al. (U.S. Patent No. 6,578,198 hereinafter "Freeman").

Art Unit: 2182

22. Referring to method claim 18 and system claim 49, Feldman fails to teach the resource retrieval comprises receiving proxies for remote resources.

Freeman teaches, in an analogous system, the resource retrieval comprises receiving proxies for remote resources (see paragraph bridging columns 4 and 5).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the method and system of Feldman with the above teachings of Freeman. One of ordinary skill in the art at time of the applicant's invention would have been motivated to make such modification in order to use resources at physically separate locations.

23. Claims 20-22, 26, 51-53, and 57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feldman in view of Skog et al. (U.S. Patent No. 6,385,650 hereinafter referred to as "Skog").

24. Referring to method claims 20-22 and system claims 51-53 Feldman fails to teach the limitations of the resource manager applying a different algorithm to retrieve the resource based on a type identifier of the requested resource; the resource manager applies one or more strategies based on the resource

Art Unit: 2182

specifier; and the one or more strategies are based on a hierarchical system.

Skog teaches, in an analogous system and method, the limitations of the resource manager applying a different algorithm to retrieve the resource based on a type identifier of the requested resource (see lines 40-58 of column 3 and lines 12-20 of column 5); the resource manager applies one or more strategies based on the resource specifier (see lines 40-58 of column 3 and lines 12-20 of column 5); and the one or more strategies are based on a hierarchical system (see lines 40-58 of column 3 and lines 12-20 of column 5).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system and method of Feldman with the above teachings of Skog. One of ordinary skill in the art would have been motivated to make such modification in order to reduce memory consumption in a system without decreasing performance when the number of managed resources is high or very high as suggested by Skog (see lines 10-26 of column 3).

25. Referring to method claim 26 and system claim 57, Feldman fails to teach the step of enabling resource retrieval further

Art Unit: 2182

comprises assigning a particular resource access strategy to an entire resource type.

Skog teaches, in an analogous system, the step of enabling resource retrieval further comprises assigning a particular resource access strategy to an entire resource type (see lines 12-20 of column 5).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system and method of Feldman with the teachings of Skog. One of ordinary skill in the art would have been motivated to make such modification in order to increase performance even if the number of managed resources is high or very high as suggested by Skog (see lines 10-26 of column 3).

26. Claims 28 and 59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feldman in view of Nishina et al. (U.S. Patent No. 5,854,895 hereinafter "Nishina").

27. Referring to method claim 28 and system claim 59, Feldman fails to teach the method and system further comprising a step of referencing a primary resource specifier from one or more alias resource specifiers so that when resource specifier is

Art Unit: 2182

modified, one or more resource users which access the resource specifier will retrieve a modified version.

Nishina teaches, in an analogous system, a step of referencing a primary resource specifier from one or more alias resource specifiers so that when resource specifier is modified, one or more resource users which access the resource specifier will retrieve a modified version (see lines 18-37 of column 6).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system and method of Feldman with the above teachings of Nishina. One of ordinary skill in the art would have been motivated to make such modification in order to enable a user to always access the most current version of a resource.

28. Claims 29-31 and 60-62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feldman in view of Whalen et al. (U.S. Patent No. 6,615,267 hereinafter "Whalen").

29. Referring to method claims 29-31 and system claims 60-62, Feldman fails to teach method and system further comprising a version strategy, wherein the version strategy comprises the step of requesting a resource with a particular version ID to retrieve the particular version or newer version of the

Art Unit: 2182

resource, and wherein the newer version is upward compatible with one or more previous versions of the resource.

Whalen teaches, in an analogous system, a method further comprising a version strategy, wherein the version strategy comprises the step of requesting a resource with a particular version ID to retrieve the particular version or newer version of the resource, and wherein the newer version is upward compatible with one or more previous versions of the resource (see lines 7-27 of column 4).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system and method of Feldman with the teachings of Whalen. One of ordinary skill in the art would have been motivated to make such modification in order to utilize the most up to date resources are available.

Conclusion

30. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following references are cited to further show the state of the art as it pertains to resource management:

U.S. Patent No. 6,308,163 to Du et al. teaches a system and method for resource management comprising a multi-level resource manager hierarchy;

U.S. Patent No. 6,453,350 to Factor teaches a system and method for locating resources in a distributed network.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eron J Sorrell whose telephone number is 703 305-7800. The examiner can normally be reached on Monday-Friday 9:00AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A Gaffin can be reached on 703 308-3301. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
